This figure shows a breakdown of users that use iCER support services. These support services include support tickets, iCER workshops and office hours.

**List of iCER workshops in December:**
- Introduction HPCC
- Introduction Linux/Unix

### NUMBER OF USERS USING iCER COMPUTE SERVICES

This figure shows a breakdown of users that use iCER compute services:

- **327 users (310+17)** use the developer nodes to submit jobs to the queue.
- **193 interactive users (186+7)** only use iCER developer nodes to do their work.
  - Only need access to software (ex. Matlab, mathematica)
  - Still in software development process and have not submitted a job
  - Find development nodes are sufficient for their research.
- **11 users** only used the iCER file systems to store their files.
- **204 researchers (186+7+11)** used iCER hardware outside of the batch queue.

### NUMBER OF USERS USING iCER SERVICE REPORT

This figure shows a breakdown of users that use iCER service reports. These support services include support tickets, iCER workshops and office hours.

**List of iCER workshops in December:**
- Introduction HPCC
- Introduction Linux/Unix

- **Tickets**
  - 10
- **Workshops**
  - 1
- **Office Hour**
  - 2
COMPARISON BETWEEN NUMBER OF USERS USING ICER SUPPORT AND COMPUTE SERVICE

DAILY SCHEDULER ACTIVITY

On a typical day, the scheduler processes approximately 161,749 jobs. This includes jobs that are queued, jobs that start and jobs that end. Put in another way, the scheduler manages approximately 112 jobs per minute.

New User Accounts created
in DECEMBER
In an effort to better serve our users, we have been analyzing the software that is being used on the HPC by recording which software modules are being loaded using the “module load” command. Clearly this is not a complete view; many users install their own software in their home directories, some modules are automatically loaded as part of a user profile and there will be a bias toward pleasantly parallel codes which will load their required modules every time a job runs (as compared to bigger jobs which would only load the modules once). However, we find this data interesting and wanted to share it with you.

The pie chart shows the most commonly loaded modules. Note again that the biggest ones are the ones included in a user’s default profile such as MATLAB, Python, and R. These modules get loaded every time they log in or run a job. As can be seen clearly, the default modules get loaded in an order of magnitude more than many of the other modules.

After taking out the default modules, the pie chart on the right shows more modules that users are choosing to include in their .bashrc files and being submitted on a lot of jobs.
